Tutorials Instructions

Rita Ahmadi

October 2026

"*Failure is instructive. The person who really thinks learns quite as much from his(their) failures as from his(their) successes.*" John Dewey

1 LLM and AI Tools

As a general principle, do not use any LLM or AI tools for solving your problem sheets. Note that your weekly assignments are not marked and the purpose of tutorials and problem sheets is to first assess your grasp of materials and second to give you an opportunity to discuss problems and your questions with your tutor and peers.

Having a well thought-through wrong solution is more helpful for your learning journey than copying a correct solution. Remember the purpose of your eduction is to learn how to learn, and you will not be able to achieve this goal if you do not make any mistakes and do not learn from your mistakes.

That does not mean you should give up or just present your first attempt, it means you should suffer as much as you can and then come to the tutorial prepared to discuss your approach, thought process and suffering!

2 Format and Writing

1. Please write clearly. In case of mistakes, either use pencil or white paper to rewrite the step.
2. Give clear instructions for each step of your solutions.
3. Please write a few words for each step and explain your thought process. This is more important than a correct solution.
4. If you prefer to latex your solutions, do not use any AI tools.

3 Uploading your Problem Sheets

1. If you take photos from your sheets, please merge all photos and upload them in a single pdf. (There are online tools or open source software that you can use.)

2. Please take clear photos.

3. Please create a OneDrive folder and name your folder: firstname-secondname (all lower case) then shared this folder with me.

4. Inside your main folder, for each course create another folder and name it(without dash or space and all lowercase), for example: quantumtheory

5. Then inside each course folder, upload your problem sheet.

6. Name your problem sheet with sheet number, for example, Sheet 5

7. If you do not have access to a camera or computer, you can use the scanner and computer in the library.
